

PSHP Interoperability

Improve Patient Care with Interoperability

Discover how EMR data sharing can enhance patient outcomes

Interoperability Transforms Data-Driven Healthcare

Peach State Health Plan is committed to helping our provider partners deliver better, more connected care. Interoperability is a secure way for healthcare systems and software applications to share electronic medical records (EMR) that could support better patient outcomes. This can be completed through EMR systems, such as Epic Systems, Healow, Athenahealth and Oracle Health.

At Peach State Health Plan, our interoperability solution is designed to support our provider partners by improving efficiency, reducing costs, and enhancing patient care. Complete the form on our Interoperability webpage to share your EMR system and help us better tailor support to you.
