Helpful Documentation Tips:

- Retake the BP if the initial reading is high during the visit (140/90 mm Hg or greater). Document and record the lowest systolic and diastolic reading in the same day
- Review hypertensive medication history and patient compliance to determine treatment plan for uncontrolled blood pressure as needed
- Do not round up BP values if using a digital machine, record exact values.

How to Improve HEDIS Scores

- For accurate measurement of BP, use the proper technique (patient sitting in a chair at least five minutes prior to reading, use correct cuff size, cuff position on patient's bare arm at the level of the midpoint of the sternum, arm of patient is supported).
- Patient reporting BP Readings are acceptable when both of the following are met:
 - » BP taken with an electronic device
 - » Documentation in the medical record specifically the reported BP reading is from an electronic device.
 - » Patient reporting BP with a manual device does not meet criteria
- Assess throughout the year to help the patient gain control through the following measures:
 - » Change medication regimen
 - » Review diet and exercise efforts
 - » Identify barriers for medication adherence, such as filing prescriptions
