

Breast Cancer Screening (BCS –E)

Summary of Changes: Only BCS-E measure will be reported. BCS is a retired measure as of MY2023.

Measure Description

The measure evaluates the percentage of women 50–74 years of age who had a mammogram to screen for breast cancer anytime on or between October 1—two years before the measurement year through December 31 of the measurement year.

Description	CODE
Mammograms	CPT: 77061–77063, 77065–77067
Bilateral Mastectomy	ICD-10: Z90.13

Codes subject to change.

To improve HEDIS measure:

- Ensure an order or prescription for a mammogram is given during annual wellness visits and/or well-woman exams for women 50-74 years old.
- Consider implementing a standing order and/or automated referrals for members eligible for mammography.
- It's important to submit the appropriate ICD-10 diagnosis code for a member's history of bilateral mastectomy, Z90.13.
- Proper documentation of mammography and exclusion in the patient's medical record:
 - » Provide results and findings of mammogram performed
 - » Document screening in the "medical history" section of the record and update the section annually/biannually

*ECDS: stands for Electronic Clinical Data Systems Reporting. Access NCQA website <https://www.ncqa.org/hedis/the-future-of-hedis/hedis-electronic-clinical-data-system-ecds-reporting/> for information on ECDS-reporting.
