

Breast Cancer Screening (BCS-E) HEDIS Measure Quick Tip

Improving Quality Outcomes

Line of Business: Medicaid, Marketplace, Medicare ●●

CONTROLLING HIGH BLOOD PRESSURE (CBP)

Measure Description

The measure evaluates the percentage of women 40–74 years of age who had a mammogram to screen for breast cancer anytime on or between October 1 — two years before the measurement year — through December 31 of the measurement year.

Description	Codes
Mammograms CPT:	77061–77063, 77065–77067
Bilateral Mastectomy	ICD-10: Z90.13

Codes subject to change

LOINC	SNOWMED
24605-8: MG Breast Diagnostic	24623002: Screening mammography (procedure)

26177-6: MG Breast – right screening	572701000119102: Mammography of left breast (procedure)
26347-5: MG Breast – left diagnostic	
26348-3: MG Breast – right diagnostic	

To improve HEDIS measure:

- Ensure an order or referral is generated for mammogram during an Annual Preventive Visit and/or Annual Well Woman Exam for members 40–74 years old
- Consider implementing a standing order and/or automated referrals for members eligible for mammography.
- It's important to submit the appropriate ICD-10 diagnosis code for a member's history of bilateral mastectomy, Z90.13. Notes:
- Proper documentation of mammography and exclusion in the patient's medical record:
 - » Provide results and findings of mammogram performed
 - » Document screening in the "medical history" section of the record and update the section annually/biannually
